

INVENTORY MANAGEMENT SYSTEM

INNOVATIVE SOFT SOLUTIONS

WWW.VIEWISS.COM

Why is Inventory Control important ?

IMPORTANCE OF INVENTORY CONTROL

- ✓ The current assets can be divided into two,
 1. Uncontrollable - Building rent, employee salary.
 2. Controllable/partially - factory over head, Inventory.
- ✓ In Controllable part, almost 70% is the inventory !
- ✓ Any excess Inventory will reduce your profit by increased inventory carrying cost. Therefore, it is highly important to control inventory.

DIFFICULTIES IN INVENTORY CONTROL

- ✓ There are two main goals of inventory control,
 1. Reduce Inventory.
 2. Manage fluctuating demand to avoid stockouts.
- ✓ These two goals are opposite to each other. If Inventory is reduced, it will result in stockout and if stockout is to be avoided then inventory will increase.
- ✓ Therefore you need to optimize Inventory level !

Are you effectively managing your Inventory?

- ✓ If you have too many items in the inventory, (which is usual in any business) Do you classify inventory under **ABC Analysis** to track and control A Items at least ? (top 20 Items contribute 80% of inventory cost as per pareto)
- ✓ At what frequency Do you update ABC classification? At least every month ?
- ✓ Do you track the **Monthly Closing Stock** Vs **Monthly Consumption** to evaluate the effectiveness of your control ?
- ✓ Do you track month-wise number of stockout trend ? Do you employ the concept of Buffer stock to eliminate stockout ?
- ✓ Do you review your buffer stock level every month ? Is there any automatic or manual reminder in your system to inform purchase whenever buffer stock level is reached for any item for timely ordering ?
- ✓ Do you track excess material purchased for an order when produced less for any reason and report concern department to reduce purchase to that extent ?
- ✓ Do you track **Consumption** Vs **Stock** every month to see you are not building up of stock?

If your answer is "No" for some questions, then there is scope to improve ! You may need our software !

Our Software Scope

It is a web-based software, running in cloud server, integrating all your connected departments viz., departments raising material issue slip to stores, purchase sales, and Despatch departments to share live information connected to Raw Material and FG material 24x7, accessible from computer and mobile.

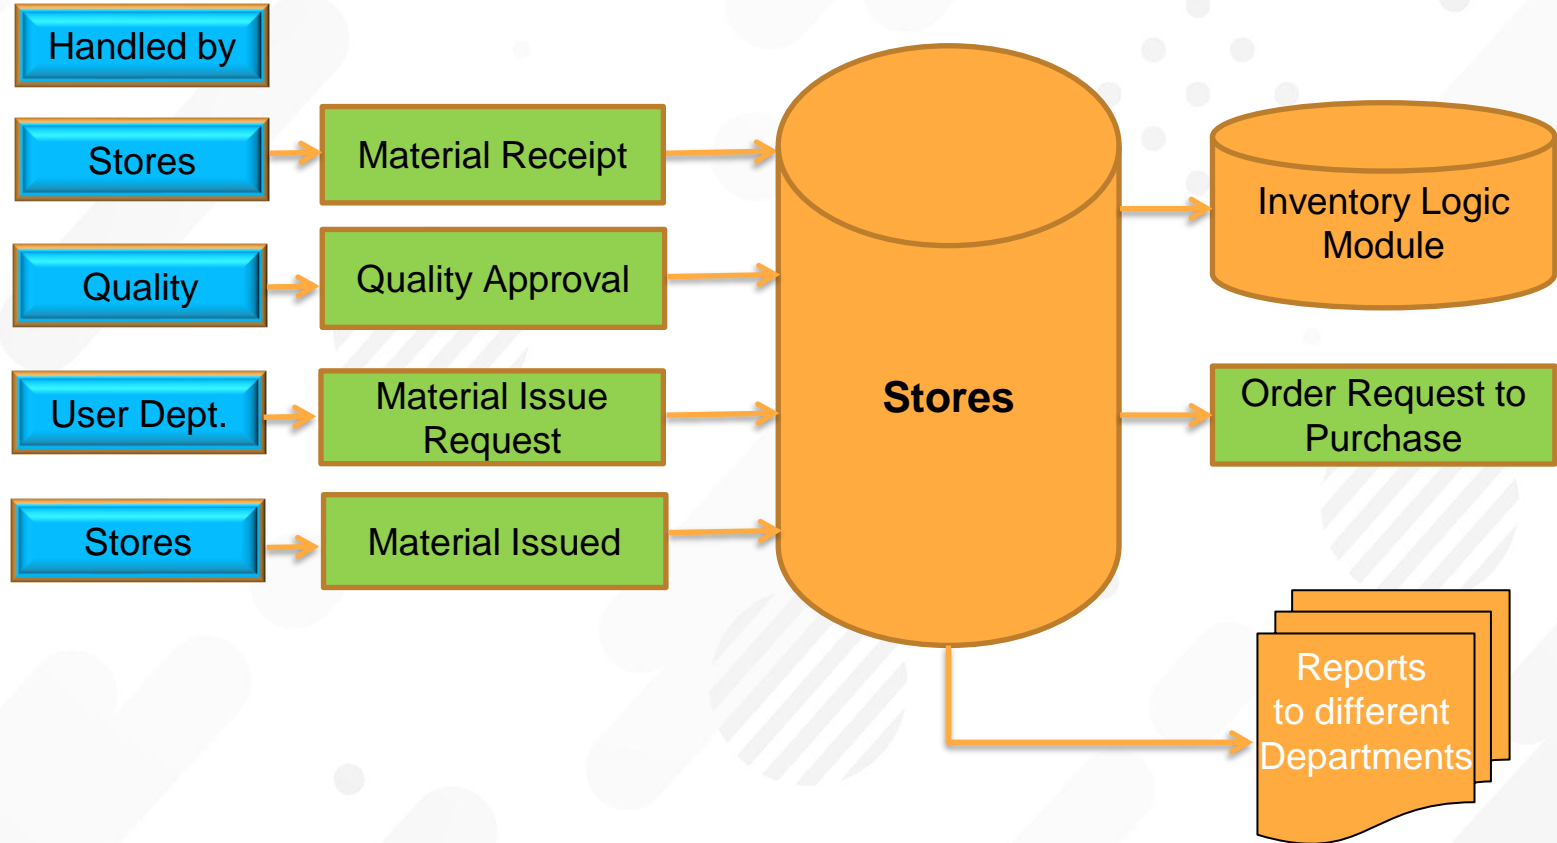

Features

- ✓ **Highly secured, with user based restriction** to access information that can be set or altered any time by system administrator in your company.
- ✓ As an option, it can also be hosted & maintained in your web server.
- ✓ **Business Logic Module - the brain of our software, stores all logics, rules & procedures and controls the system!**
- ✓ A Windows 10 system having Wi-Fi / LAN connection is sufficient to use as server. There is no need for any other high-end Computer/Server.
- ✓ **Live Reports in your mobile/computer** at all times – 24hrs a day across the year.
- ✓ No need for any other communication like mail, phone etc., for sharing information.
- ✓ MIS reports for better Management.

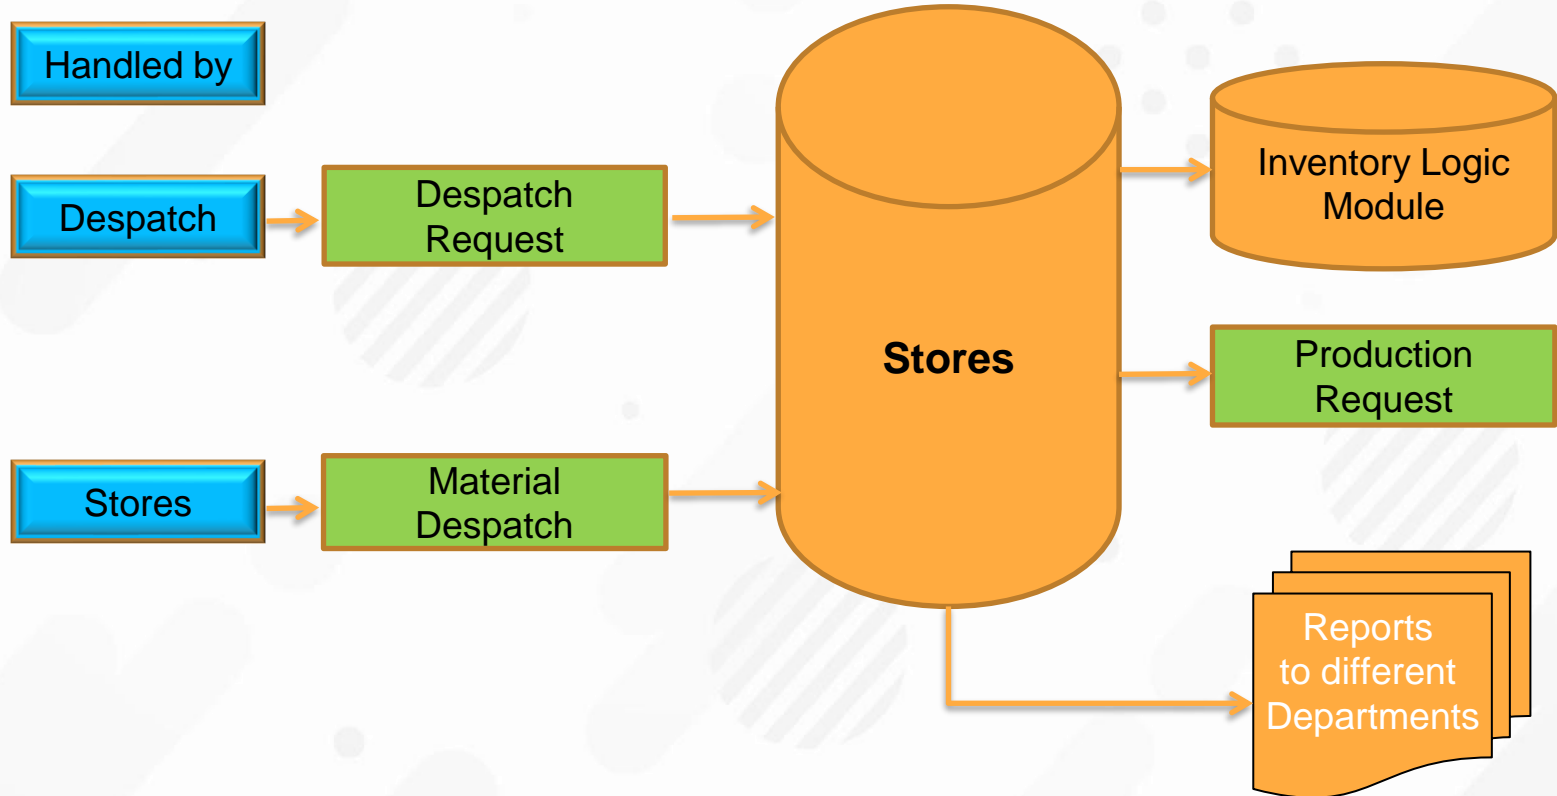

Benefits of our Cloud Server

- ✓ No investment for you on server computer, repair, maintenance and replacement.
- ✓ No need to invest for software for every site and can use the same software for all sites.
- ✓ No need of daily backup of database.
- ✓ No need of employing any hardware / software computer engineer.
- ✓ No AMC needed for your server as you don't need one.
- ✓ You can access data from your Computer/Mobile all 24hrs 365days of the year from your home or from anywhere across the world which is not possible if you go for your own office server.
- ✓ If you are having more than one site and HO being in different location, it is better to go for our / your own cloud server to reduce the cost and higher utilization and access level.

RM, Spares & Consumables Management

FG Stores Management

BUSINESS LOGIC MODULE

- ✓ This a **special module in our system** which is not available in many other ERPs
- ✓ It stores **all business logics and rules** (provided by us with our experience and provided by you) to control the operation of the software.
- ✓ In this case of inventory management it automates takes care of -
 - Lead time Tracking
 - Buffer Management
 - Ordering Frequency
 - Stores Economic Order Quantity
 - *(you need to store it manually now. When you implement purchase module it will be automatically and continuously updated by this logic module)*
 - Raises automatic purchase request for all C Items *(If you want we can include B items too)*
- ✓ It analyses the whole month data and automatically prepares exception report to the management on the following topics once a month for review.
 - Increasing stock
 - More stockouts
 - Increasing Lead time of any items
 - RM consumption fluctuation

How it all Works ?

- ✓ Stores Dept – Whenever there is FG from Production or materials from suppliers, stores dept. enters them and it will appear immediately in Quality/Maintenance departments screen for approval.
- ✓ This material will appear in **issue section** screen of stores/despatch department only after approval.
- ✓ Raw materials can be grouped under three category,
 1. Reserved stock – Procured against a customer order
 2. Free Stock – excess stock due to partial/non execution of any order .
 3. Buffer Stock – Procured to cover lead time consumption and to manage fluctuating demand
- a) Our software automatically inform purchase - when Buffer stock consumption starts or reordering.
- b) While ordering a raw material, purchase dept. sees stock report and reduces the order to the extent of free stock and increases to bring back the buffer stock level to the target.
- ✓ Whenever Stores dept. enters the receipt, **our software automatically does the correction in all categories of stock.**
- ✓ In case of FG dispatch, Sales dept. will raise dispatch request and other cases User dept. make issue slip online from their computers and it will appear in material issue screen of stores.
- ✓ The business logic module monitors the activities & current stock and automatically generate request to Production & Purchase department whenever stock goes down.

Reports

Status Reports

- ✓ Day-wise Transaction history
- ✓ Aging Report
- ✓ Stock statement summary (type-wise)

Analytical Reports

- ✓ Rejection report (for any period)

Trend Graph Reports

- ✓ Consumption Vs Buffer Stock Trend (for any type/material/group) for any period
- ✓ Buffer Stock Usage Trend (for any type/material/group) for any period
- ✓ Stockout Trend (for any type/material/group) for any period

Current Stock Ageina Report

INVENTORY MANAGEMENT
MANAGEMENT

STOCK AGE

Calendar will appear whenever you click date fields to select date. No need to type anything.

Age of the item in general cases should not be more than 1.5 times of average ordering cycle time or twice the procurement lead-time for the item. Items exceeding this limit need to be analyzed to pin point the issue for corrective action.

Current Stock & ABC Analysis

INVENTORY MANAGEMENT
INVENTORY MANAGEMENT

ABC ANALYSIS AND CURRENT STOCK REPORT

Group

Run

ABC analysis applies the pareto rule of 20/80. It helps you to closely monitor A and B items that are only 20% but covers around 80% of your inventory value.

In this case top 3 Items covers 97% of inventory Value. You have to review these 3 Items stock regularly not to have excess stock !

C Items will be more in number. Our software automatically raise request to purchase dept. when these Items reaches buffer stock level. Purchase will order ! No one needs to review or raise Purchase request and these are almost 50% of items. **Therefore almost 50% of items are managed without any management intervension!**
